

MK RANGE

BROWN GOLD AT YOUR FINGERTIPS

We innovate and develop our products every day to improve their performance and provide you with effective solutions. Solid organic matter of all types (manures, composts, dry and wet droppings, green waste, etc.) cater perfectly for the needs of your plants in terms of nitrogen, phosphorus and potassium (N, P, K) when correctly spread and used at the right time.

The origin, density and dry matter content of manure, compost and digestate differ. Our range of MK solid spreaders is designed to meet the challenges of spreading both dense and light products.

Fully galvanised, our spreaders offer a loading volume of between 10 and 24 m³.

EXTREMELY ROBUST

A WORKHOUSE AT YOUR SERVICE

Farmers, cooperatives, contractors: our MK range of spreaders is made for you. The models, with a real capacity of 10 to 24 m³, offer a working width of up to 20 m. **Specially designed for intensive use, this solid organic fertiliser spreader is known for its robustness and versatility.** We have designed the equipment to ensure quality spreading and high output. To try it is to embrace it!

YOU CAN TRUST IT BLINDLY

100% galvanised, the MK range is renowned for its robustness. Whatever the operating conditions, it will handle them. **On the road, in hilly terrain, on uneven ground, your MK is not afraid of anything.** Thanks to its Heavy Duty design and technical solutions the MK spreader range will fulfill your spreading demands, even in the most challenging products.

INTELLIGENT DESIGN

THOUGHT OUT IN EVERY DETAIL

The narrow body is combined with a high frame height and large diameter vertical beaters. This design prevents manure from arching against the crossbar. The box design optimises the loading volume and facilitates the discharge of the fertiliser. **Maximise your output by adding wooden or steel extensions.**

Our spreaders can be equipped with large diameter wheels to limit the need for tractive power or with large width wheels to minimise soil compaction and facilitate loading.

The MK spreader offers an excellent compromise between spreading width, power requirements and spreading quality. It fulfils its mission: to spread all types of products consistently.

AN ALL-TERRAIN SPREADER

The MK20, MK25 and MK30 models meet the needs of small and medium-sized farms. Designed for mountainous or hard-to-reach areas, these models are among the lowest centre of gravity spreaders on the market for this capacity type. With a loading height of less than 2 meters, the MK spreader can easily be loaded. **The low centre of gravity gives the spreader optimum stability in all terrains.**

YOUR REQUIREMENTS, OUR STANDARDS

Panoramic grid
Optimum visibility of the
spreader box discharge

Extensions
Designed for wooden
or steel extensions

Maintenance
Centralised lubrication points

Vertical beaters
Ø885 mm : MK10 to MK30
Ø1035 mm : MK35 to MK60T

Lighting and indication
See and be seen to make
your journeys safer. Complies
with current regulations

Drawbar
sprung and
galvanised

Axles
For added safety, we offer
oversize axles as standard

Brakes
Brake size is based on load,
speed and wheel diameter

Drive shaft
Cam safety and free-wheel

Gearbox
One-piece spiral bevel gear

RESISTANT AND EFFICIENT

As standard on all our models, the chain floor is made up of 90x50 mm closed tube bars with 2 Ø16 mm marine chains. The maximum stress resistance of the chain is 32 tons. You can control all the parameters of your chain floor: drive, speed and stop from your control panel in the cabin.

The chain floor is driven by a hydraulic motor and gearbox. As standard, our MKs are equipped with a 160 cm³ hydraulic motor. For spreading heavy products (marl, lime, etc.) we offer a larger motor. This drive concept has proven itself. It is capable of moving heavy loads and ensures even spreading.

Positioned at the front and rear of the floor chain drive shaft, a scraper prevent any accumulation of material building up in the chain floor drive. Sudden stops are avoided and your equipment is easier to maintain.

- 1 | Remote lubrication
- 2 | Scraper to keep floor chain sprocket clean
- 3 | Front pulley scraper
- 4 | Manual chain floor tensioning
- 5 | Chain floor tension visual level
- 6 | Hydraulic chain floor tension
- 7 | Marine chain floor Ø16 mm

YOUR COMFORT, OUR PRIORITY

CONNECTION

Hydraulic hoses and wire harnesses are kept away from PTO shaft and easy to access. The bracket is used as holder for the hoses and wire harness when the spreader is parked to prevent the couplings for impurities

TRANSMISSION

As standard, our MKs are equipped with a 6-spline primary transmission and a secondary transmission with a freewheel for automatic disengagement in the event of overload. For your safety and the protection of the shaft, it is completely covered by a PVC tube. A swivel bracket will hold the PTO shaft when the machine is parked to prevent impurities in the PTO shaft. **From the MK35 upwards, our spreaders are equipped as standard with a wide-angle PTO shaft to optimise the manoeuvrability of the spreader during operation.**

DRAWBARS

The standard galvanised sprung drawbar ensure an effective suspension, giving a smooth ride on uneven ground. Optionally, a hydraulic version is available. You will appreciate this comfort on the road and in the field. **The design of our drawbars ensures that the pulling force from the tractor are is transferred perfectly to the chassis.**

JACKS

Choose between a manual or hydraulic jack. **Our jacks are adjustable in angle and height to suit different hitch systems and wheel sizes.** The jack can easily be put into transport position without usages of tools.

SAFETY

FIRST AND FOREMOST

AUDIBLE BUZZER

Our spreaders comply with the EN690 standard. An audible alarm warns the surroundings as soon as the beaters are rotating while the spreader is stationary.

LIGHTING AND INDICATION

Our MKs are equipped with 2 LED rear lights and white and red reflective panels at the front and rear.

ROAD JOURNEYS

With a low point of gravity due to the narrow box design and the large tyres, your MK is ideal for driving on the road and is easy to pull in the field. Equipped with reinforced axles with brakes and large hubs, it allows you to drive safely from the storage area to the field.

THE STRENGTH OF OUR BEATERS

Ø885 mm for the MK10 to MK30 models and Ø1035 mm for the MK35 to MK60T models, the diameters and rotation speeds of our vertical beaters are among the highest on the market. This feature facilitates crumbling and ensures optimum spreading consistency. The beaters remain clean and require little maintenance. The design of our beaters has been thought out for your productivity: quick discharge and precision.

LARGE BEATER DIAMETER

Easy product discharge and spreading quality

LARGE TUBE DIAMETER

Robustness and impact resistance

REMOVABLE SPLINED SLEEVES

Easy to maintain

REVERSIBLE AND REMOVABLE 400 HARDOX® BLADES

Perfect crumbling, robustness and ease of maintenance

STAGGERED BLADES ON THE SPIRAL

Better distribution and protection of the beaters

BLADE RETENTION TABS WELDED TO THE SPIRAL

Reliable and robust

REMOVABLE 400 HARDOX® EJECTION BLADES

Even distribution over the width and easy to maintenance

Our aim is to offer the agricultural industry state-of-the-art natural fertiliser spreaders with technologies that take account of the environment and people.

REAR DOOR(S)

SPREADING TO THE EDGE OF THE FIELD

Choose between one or two rear doors (right and/or left). The rear door ensure a full coverage of the beater. When choosing both left- and right rear door, the spreading unit is fully covered. **These allow you to control the spreading, especially in situations where the field is on the roadside or property line.**

TRANSPORT

REDUCED
WORKING WIDTH

FULL
WORKING WIDTH

REAR HOOD

GO FOR UNIVERSALITY

Versatility is undoubtedly the most important feature of our spreading hood. It can be fitted to all the rear frames of our spreaders, including those already in use. When spreading light material, the hoods ensure the material is delivered to the spinners for optimised spreading pattern. **Using our hood allows you to obtain an optimal spreading regularity even with light products requiring a low dose per hectare: dry droppings, ashes, dry composts, plant sludges, solid digestates.** It is hydraulically controlled and includes specific curved blades for homogeneous spreading over a large width: from 12 to 20 m depending on the product spread.

SIDE DEFLECTOR(S)

EFFICIENCY AND PRECISION

Rear hood can be equipped with side hydr. side deflectors to increase spreading precision, **especially in situations where the field is on the roadside or property line.**

SPREADING TABLE

SPREADING IN THE BROADEST SENSE

Do you need to spread small quantities of a light and volatile product? The **PRECISIUM** spreading table is dedicated to this application. Our 2 horizontal beaters and spreading discs are perfectly sized. They ensure an excellent transverse distribution of the product over a maximum width of 24m depending on the density of the product spread. You achieve a homogeneous and regular coverage over the whole plot with a controlled application per hectare.

Easy mounting and dismounting of the equipment makes your spreader even more versatile. The MK can be switched from a vertical beater rear frame to a horizontal beater spreading table. Each item corresponds to a type of application.

1 | Spreading table for the rear frame from MK35 upwards

4 | Product centred in the centre of the disc for optimum distribution

2 | Adjusts the opening and inclination of the spreader hatch. Automatic retracting system in the event of blockage.

5 | - spreading discs Ø1015 mm
- 3 to 6 adjustable blades per disc
- rotation speed 650 rpm

3 | Right and/or left side deflector(s)

6 | - horizontal beater Ø800 mm
- 32 blades per beater with extra high wear resistance
- rotation speed 400 rpm

TECHNOLOGY AT YOUR SERVICE

OPTIMISE YOUR YIELDS

Current expectations for responsible agriculture drive users to exploit the animal manure of their farms. More than a fertiliser, it is a resource that should not be wasted. Modulating the dose of inputs optimises your yields. We offer a complete range of electro-hydraulic and touch controls. Choose according to your required precision level.

MASTER 2F SIMPLE CONTROL BOX

Ergonomic and easy to use, the *Master simple 2F* control box allows you to control the functions of the guillotine door and the chain floor. Apply just the right amount of material with the dosage control.

CONTINUOUS INFORMATION ON THE SCREEN:

- chain floor speed
- load counter
- number of working hours

SETTINGS FROM THE CONTROL BOX:

- guillotine door opening and closing
- chain floor start and stop
- manual mode: adjustment of the chain floor speed
- auto mode: control proportional to the chain floor speed
- several safety devices available

YOUR SATISFACTION, OUR COMMITMENT

UNLIMITED RELIABILITY

From 3D computer design to delivery to your dealer, we control the entire process. Our MK range builds on the solid reputation of our spreaders, which has been built on quality and reliability for years. More than just words, we guarantee the body and chassis for 5 years under normal use of your machine.

CUSTOMER SERVICE

Supported by our customer service department, our distribution network will accompany you from the moment your machine is commissioned. Our technical teams are available in the field to train, advise and assist our dealers in order to guarantee you an efficient service. Our goal is to provide you with the best customer experience before, during and after your purchase.

SPARE PARTS

Our warehouse and logistics departments ensure spare parts availability. They support and advise our distributors to ensure your equipment is maintained and repaired in the best conditions. Our network of dealers is on hand to meet your needs and order your spare parts as quickly as possible.

PICHON ACADEMY

We take pride in training our network of dealers and their technicians in the use and maintenance of our machines. Our network of dealers will support you from the moment your equipment is commissioned and provide after-sales service. That's why we developed the PICHON ACADEMY training program. This enables them to gain all the expertise necessary to help you get the most out of your Pichon equipment. Our distributors are on hand to advise you and provide you with our manufacturer's expertise.

OFFERING YOU THE BEST

Agriculture of the future needs to take into account environmental issues. With this in mind, we bring precision spreading equipment designed to make the most of organic farm manure to the market.

We are part of the SAMSON AGRO Group with 3 production sites in France, Denmark and Poland. With constant innovations since the 1940s, we ensure that sustainable agriculture considering people and the environment is more balanced.

Our ambition is to support our customers in improving their performance through our high-tech innovations. Our network of dealers along with our commercial and technical teams are at their service to guarantee optimal use of our tools and efficient spreading.

Sales representatives, design engineers, metal workers, mechanics, technicians, drivers... Our multidisciplinary team combines competence and responsiveness. What we all have in common is an insistence on quality and customer satisfaction!
